Tourism is a travel for recreational, leisure or business purposes. Tourism is important because it brings in large amounts of income in payment for goods and services available. It is important to help travelers to choose what they need, especially the country. So tourist agents always give helpful advices.

In the Japanese national cuisine many dishes are prepared with very fresh or just raw products. The basic ingredients of Japanese cuisine: fish, rice and seaweed. The most popular dishes are «sushi» and «sashimi». There are more than 200 species of «sashimi». These are pieces of raw fish, which like sushi are eaten with soy sauce and Japanese horseradish «wasabi». «Sukiyaki» and bean curd «tofu» are also popular. In addition, in Japan it is necessary to taste «marbled meat» and warm rice wine «sake».

There are a lot of attractions you should visit in Tokyo. You can see the Imperial Palace, the Tokyo Tower, the Rainbow Bridge and the Japanese Disneyland. The Imperial Palace in central Tokyo near the Central Station is the main monument of history. However, it can be visited only two times a year on the second of January and on the twenty third of December.

In Tokyo there are many magnificent parks that make people admire the variety and beauty of local nature. Kumotori is the highest mountain in Tokyo and admiration of all tourists coming to this extraordinary city.

Sumo is a national and respectable kind of sport in Japan. The winner in this kind of sport can get a set of interesting things, such as one thousand mushrooms «Siitake», **beef**, **coca-cola and petrol.**

Tokyo can truly be said as one of the most technologically advanced and the most beautiful cities in the world. Welcome to Tokyo!

СОВРЕМЕННЫЙ ПРОЕКТНЫЙ МЕНЕДЖМЕНТ

Павлова А.И., Игнатьева Е.А.

As the project environment grows in complexity, project management will require team, stakeholder and executive collaboration in the future like never before. On-the-job application of training, custom-made project approaches, innovative project tools and smarter resource management will be essential for driving the greatest business impact. Not only project management, but also the definition of «project success» has changed to encompass more than the triple constraint of time, cost and scope.

Programme management will gain momentum, but resources remain in short supply. Increasingly, large initiatives undertaken by corporations and government agencies are being recognised for what they are and aren't – namely programmes, not projects, which require a highly advanced set of skills supported by appropriate tools and methods to successfully execute. Yet many organisations struggle to find the right people and lack the management practices necessary to ensure success. In the future we will see more investments made in competency models, training, methodology development, tool use, and career paths to ensure that professionals who carry the title «programme manager» are fit for the role.

Smarter project investments will require a stronger marriage between project management and business process management (BPM). In the financial services industry, and specifically in the insurance sector, there will be a continued laser-like focus on performing business processes as efficiently as possible to drive down operating costs. The philosophy of BPM is fast becoming a key factor in project selection.

Good project managers will buck unemployment trends. Even though unemployment is at record levels in many countries, good project managers are hard to find. Recruiting continues even in tough economies and organisations need individuals who can perform the basics flawlessly. The hunger for project management basics, in particular risk management, will continue to surge in the future, especially in such countries as India and China where project manager attrition rates are disturbingly high and continuous training of new staff is critical.

ПРЕИМУЩЕСТВА СОВРЕМЕННОГО БАНКИНГА

Nowadays one of the most up-to-date tendencies in the modern global financial world is electronic banking. It is chosen by customers mostly because of high speed and efficiency. With the onset of the Internet technology, there are a lot of things that you can take advantage of. The space and time constraints are removed and the banking services are provided 24/7 all year round. You can access your bank account online any time of the day, even on holidays. A customer is no longer a bank's branch customer, but a bank customer. You need not physically go to a bank to withdraw money and you can check and monitor your transactions with just a few clicks of the mouse even in the wee hours of the morning.

Whenever there is Internet access, you can always check your bank transactions. This is best for business travelers and those who are in far away areas. Such accessibility is very beneficial when it comes to emergencies and you need to access your account.

One of the advantages of online banking is that you can save a lot of time. No longer would you have to wait in line for your queue in banks or in ATM machines. Confirmation and execution of your transaction can be done in a matter of second.

Online banking has set a revolution in how business is done. Not only would you benefit from personal banking but doing your business transactions online proved to be very beneficial too and can save you a lot of time and money.

You can not only monitor your bank transactions online, but you can also manage other types of account like IRA, securities and CDs. If you are an investor you can also take advantage of financial tools like stock quotes, rate alerts and other managing programs.

Though not all the people (especially the older ones) are still very enthusiastic about using this technology, we think that it's just a matter of time as there are very important advantages of e-banking: 24/7 availability, accessibility, speedy transactions and multitasking.
